

With the ImageMaster #174; PRO AR, TRIOPTICS offers an accurate and fast production test system for Augmented Reality optics. The ImageMaster #174; PRO AR measures single components like ...

The measurement of 2D images, spectral data, and flicker values makes LumiTop one of the fastest, most comprehensive, and extremely accurate light-measurement solutions for diverse AR/VR tasks.

To test the effectiveness of post unwrap algorithm, an AR coated germanium lens was measured on a LUPHOScan 120 HD. A centre-level table was used to mount the part to compensate for any ...

The ImageMaster #174; Lab AR Flex is positioned as a future-proof solution, offering a wide range of measurement parameters around MTF measurement to evaluate diffractive and reflective ...

Fully automated test handler designed to test both electrical & optical characteristics of VCSELs at module-level. It is a fully automated test & qualify system for full LIV sweep test as well as spectral ...

These testers are suitable for both prototyping and production environments, supporting automated or manual testing processes for various AR/VR components such as optical display engines, ...

This paper provides a brief overview of display metrology requirements common to all types of AR/MR/VR displays and looks particularly at the unique requirements of testing AR and MR ...

OptoFidelity Production IQ is a fast and easy-to-use image quality testing system designed for AR waveguide manufacturing environments. The tool is specifically engineered to perform fast ...

A comprehensive AR/VR display test solution from Radiant combines the TT-ARVR application-specific software module, a ProMetric #174; Imaging Colorimeter or Photometer, and the Radiant XRE Lens or ...

AR Optical Module Test
