How has fiber optic technology changed over the years? Learn all this and more in this timeline documenting the history and development of fiber optics for communications.

Therefore, the implementation of software-defined networking (SDN) in optical communications networks appears inevitable, and we expect to see more advances in this area in 2017.

Recent advances in fiber and optical communications technology have reduced signal degradation to the point that regeneration of the optical signal is only needed over distances of hundreds of kilometers.

That's pretty decent, but across the Atlantic, researchers at UK's Aston University recently managed to coax about 1.2 million times that rate using a single fiber optic cable --a new ...

The performance of fiber optic communication systems reached its maximum several years ago with the introduction of 100 Gbit/s systems (100G). The further devel.

Your editors attended the 2017 Optical Fibers Communications (OFC) Conference for two days. Such a short visit is hardly sufficient to present a complete overview of what is considered the ...

By broadening fiber's communication bandwidth, the team has produced data rates four times as fast as existing commercial systems--and 33 percent better than the previous world record.

We will contribute to the development of the optical fiber transmission technologies for future versatile and large capacity data communication including 5G mobile system while assessing ...

This chapter provides the introduction to technical trends and market status of both broadband wireline and wireless access networks and also summarizes the technology evolution of ...
