No charitable income tax deduction is allowed, but the distribution (which counts toward the donor's required minimum distribution if one is due) is free of tax.

For philanthropically minded investors hoping to minimize taxes, a charitable remainder trust (CRT) allows donors (a.k.a. grantors) to make a tax-deductible gift to charity while also generating income ...

The type of income is characterized in tiers, and the distribution is treated as a distribution from the first tier, then the second, etc. Note that the income in a particular tier may have been earned in a prior ...

The CRAT payout rate must be a minimum of 5 percent and cannot exceed 50 percent. The payout rate is further limited to the maximum rate that will provide to charity, on an actuarial ...

Income distribution is mandatory and principal may be invaded to satisfy the requested payout. No additions to the principal may be made after the trust is established.

Charitable Remainder Trust distribution rules are essential to understanding the value of CRTs. Read everything about them here.

Charitable remainder trusts are irrevocable and come in two basic forms: the charitable remainder annuity trust (CRAT) and the charitable remainder unitrust (CRUT). A CRAT pays a fixed ...

Annuity distributions are taxable each year to the noncharitable beneficiary and reported on Schedule K-1 from the trust to the extent of income earned by the trust. Distributions are taxed ...

A CRAT gives non-charitable beneficiaries the same income yearly, while a charitable remainder unitrust trust (CRUT) recalculates payout annually.
