

In almost all cases, dielectric mirrors based on multilayer structures (mostly quarter-wave mirrors) are used as laser mirrors. (The article on dielectric coatings presents some details on the fabrication of ...

Get product specifications, Download the Datasheet, Request a Quote and get pricing for Diode Laser Mirrors on GoPhotonics.

Laser engraving on mirrors is a great way to use your laser and make unique and decorative pieces. The laser works by vaporizing the material off the back of the mirror. The reflective ...

These Laser Line Dielectric Mirrors are suitable for demanding laser applications. You will find a variety of sizes starting at 12.7mm diameters, up to 50.8mm and specific wavelength mirrors starting from ...

Combining laser-quality substrates of up to 10-5 surface quality, with a dense reflective coating, and a damage threshold specific to the laser type and wavelength, these mirrors are ideal for a wide range ...

OPTOMAN's Laser Mirrors are widely used in scientific, industrial, medical, space, and laser communication systems. Compatible with Nd:YAG, Er:YAG, dye, diode, and other solid-state or fiber ...

Learn how to laser engrave mirror with a diode laser using the xTool M1. Includes mirror engraving settings, a test grid, and pro tips for clean results.

Learn how to engrave a mirror using a diode laser. I'm using the xTool S1 40W, but this process can be applied to any diode or blue light laser. Keep in mind the settings and set up will...

asphericon provides laser mirrors for use from 400 nm to the near IR range for a wide variety of sources, such as fibre, diode and Nd:YAG lasers. They include plane mirrors as well as concave mirrors and ...

This advanced laser cutting machine is equipped with a powerful 20W laser that can etch designs onto various materials, including glass. Its precision and efficiency make it an ideal tool for crafting ...
