

With the upgrading of urban and rural power grid in China, the reliability and index of power supply has been significantly improved. The completion of distribution network automation is the only way to ...

Station Automation and Optimization of Distribution Circuit Operations is the final report for the Station Automation and Optimization of Distribution Circuit Operations project (Contract Number CEC-EPC ...

New technologies are emerging to automate the invoicing/ payment stage of the customer journey. Automating invoicing and accounts receivable improves productivity for the distributor and the ...

This study investigates the influence of distribution automation on the dependability of electricity networks, concentrating on important functional metrics and their relationship with network ...

Distribution Automation: A family of technologies, including sensors, processors, information and communication networks, and switches, through which a utility can collect, automate, analyze, and ...

Smart Grid July 2021 Newsletter article, which focuses on the readiness, levels and intensity of Distribution Automation.

Our practitioners share their insights and perspectives on the trends and challenges shaping the market. Understand power grid resilience. Future-proof your operation with TRC ...

We shared a framework for the journey from zero power system automation to a comprehensive smart grid. This evolutionary model is based on field experience in reliability projects in 95 countries.

In response to the construction trend of "n + 1" architecture, an integrated scheme" of distribution automation master station system based on "n + 1" mode is proposed, and it is verified ...

Where to start and with which tasks? Decide use case of interest, and then the elements and functionalities that should be automated. Confidentiality requirements. Which data to share among ...
