

Several factors, having a major impact on monitoring site selection process have been identified, including: network architecture, voltage level, feeder category and customer/end user category.

The EPRI report is focused on distribution automation and develops an extensive view of the intelligent network including the development of new equipment. It also emphasizes the ...

SEL Engineering Services provides distribution automation control solutions that improve reliability metrics, reduce customer outages, and provide rapid fault detection and system restoration--and are ...

Automation in the distribution field allows utilities to implement flexible control of distribution systems, which can be used to enhance efficiency, reliability, and quality of electric service.

The deployment of these automation and control technologies that rely on the availability of various parameters such as voltage and current in certain nodes of the network has led to an ...

These features enable Distribution Automation (DA) operations by coordinating field devices, specialized software, and dedicated communication networks. This coordination allows the system to ...

This program improves the safety and the reliability of the network. However, the process is labor-intensive and, as many utilities, HQD should face the challenges of an ageing workforce.

Hydro-Quebec has developed and used a reliability software application (FIORD) to evaluate the impact of its distribution automation project based on data from 2 years of real outages

Automation and control systems necessary to manage distribution networks with high penetrations of DER are a particular focus, along with the controls needed to provide services and ...

Distribution Network Automation QC
