

Learn how I approach Cable Trays Seismic Design to protect power and data in earthquake-prone areas. Understand key principles, methods, and applications.

The seismic performance levels of cable tray systems are presented according to current seismic design codes. A performance-based optimum seismic design procedure for cable tray ...

As a cable tray supplier, understanding the seismic design considerations is crucial to ensure the safety and functionality of these systems during earthquakes. In this blog post, we will explore the key ...

EN 1998 Eurocode 8 applies to the design and construction of buildings and other civil engineering works in seismic regions. Its purpose is to ensure that in the event of earthquakes human lives are ...

We offer a pre-engineered, time-saving solution which braces and secures non-structural equipment within a building to minimise damage from earthquakes or seismic events.

When fitting cable trays and their accessories, the products are cut on site to create changes of direction, adjust sections, etc. Damage can also occur during handling; as a result, both the ...

Selecting the right earthquake resistant cable tray is critical for safety and compliance. A methodical evaluation ensures your system can withstand seismic events.

The present invention relates to a cable tray with an earthquake resistant function of a new structure capable of preventing a cable from being disconnected or preventing a short circuit...

Seismic bracing systems, are developed to prevent possible damages in the building installation, especially during natural disasters...

As with cable restraints, floor- or roof-mounted electrical distribution support systems will normally involve a box frame that supports the system (single or multiple runs) with some kind of a trapeze bar.

The present invention relates to an earthquake resistant cable tray. An object of the present invention is to provide an earthquake resistant cable tray for preventing a cable...

Our team of experts can help you select the best cable tray series for your application, as well as designing your seismic bracing layout to ensure it meets applicable building codes and standards.

Earthquake-resistant cable tray construction in Eastern Europe
