

FTTH Application-Grade Core Switch High Temperature Resistance Selection Guide

This document is intended to serve as a general guide for installing and termination of in-building network, including testing procedures. The contractor/installer must always refer to manufacturer's ...

According to the fast deployment of FTTX and its worldwide application, CRXCONEC provides the end-to-end solution for optical distribution networks and last-mile infrastructure.

over FTTH solutions. Our portfolio of products and engineering support is designed to address your specific challenges from speed of deployment, labor and cost considerations, performance ...

Applications from DC through Ka-band High power density o Proven reliability at high junction temperatures, mean time to failure (MTTF) of greater than 10^7 (10 million) to 10^9 (1 billion) hours at ...

Our integrated FTTH solution simplifies the installation process, reducing labor costs and accelerating deployment timelines, ensuring you can meet project deadlines efficiently.

This document provides a handbook on fibre-to-the-home (FTTH) networks with the goal of supporting informed decision making for building fibre infrastructure.

Please select the optimal ferrite material according to your application. By clicking on the material names in the selection guide below, you can view the product list.

Any core size line that intersects the LI2 coordinate represents a workable core for the inductor if the core's AL value is less than the maximum value obtained on the chart.

With NanoTune, the world's first AI programmed high-definition core aligning fusion splicer. NanoTune reduces the need to recut defective fiber cleaving edges - the primary source of frustration for operators.
