

Fiber optic home router used as a switch

Note that you need a router in order to use a switch. A switch can't assign IP addresses or create a network like a router can--it merely acts as a traffic cop for the signals coming through.

Fiber internet does not use a traditional cable modem. Instead, it requires an Optical Network Terminal (ONT) -- a device supplied by your fiber ...

In summary, the main limitations when using a router as a switch are performance, port availability, and cost. For many connected devices, higher speeds, or advanced switching features, a ...

Instead of upgrading my router, I'm considering placing an unmanaged 10gb switch between my modem and router (switches seem to be a LOT cheaper than routers) to allow other ...

An ONU connects fiber to your network, while a router manages traffic, and a switch links devices inside your LAN.

You will usually run into weird race conditions if you put the switch before anything else connected to your ONT. You really should look at placing a router as the next thing in line to your ONT.

Fiber internet does not use a traditional cable modem. Instead, it requires an Optical Network Terminal (ONT) -- a device supplied by your fiber provider that converts the light-based ...

This wikiHow teaches you how to convert an old router into a network switch. This is useful if you want to connect multiple devices to a wired internet connection.

Discover if you can use a router as a switch in your home network setup. Learn step-by-step how to configure an old router as a network switch.

If you are looking for a new fiber internet router, then you should check our round-up of some of the best routers right here.

As fiber networks become the backbone of modern connectivity, understanding the differences between core networking devices--ONU, router, and switch--is essential. While they ...
