

Fiji Optical Cross-Connect Box

An optical cross-connect (OXC) is a network device that switches high-speed optical signals between fiber inputs and outputs without converting them to electronics.

Performance metrics focus on insertion loss (typically ≤ 4 dB), crosstalk levels (≤ -35 dB), and power consumption per port. Cost-efficiency extends beyond initial purchase price to include ...

Find durable fiber optic cross connect boxes for reliable telecom infrastructure. Outdoor and indoor models with multiple ports. Shop now for quality!

FOLAN optical boxes allow the connection of cables for distribution to other cables or active equipment. They do not require the use of a rack and can be attached to a wall, DIN rail or pole.

All products in this family offer modular design for incremental growth and are ideal as outdoor protected environments for cross-connect installations. Compatible with Corning rack-mountable hardware, ...
