

High-Pressure Blow Molding Machine Distribution Box

We can provide experienced customers the high speed molding system, or the entire production-ready line for new customers, with all auxiliary equipment needed for a world-class operation.

There are different types of blow molding machines, including extrusion blow molding, injection blow molding, and stretch blow molding, each suited to specific applications and production ...

Explore automated systems for conveying, collating, bagging, boxing, and palletizing blow-molded bottles optimized for speed, safety, and precision.

FKI offers the most suitable Accumulator Head type Blow Moulding Machines for wide-ranging industrial and packaging applications, for storage and transport of hazardous liquids and applications in the ...

For over 50 years, Mauser Packaging Solutions has been designing and building high-performance blow molding machines and peripheral equipment. Together, our team of experienced designers will work ...

The extruder screw and the feeding zone geometry are designed for many blow moulding plastics with high melt strength, low melt temperature and good homo-geneity

Toggle balance clamping structure, with platen opening & clamping and mold platen movement by linear guide, to achieve low friction and high speed. Based on the Finite Element Analysis design, and ...

XTRA rotary blowing systems deliver high-speed bottle production, combining efficiency, flexibility and consistent performance in demanding environments.

Its modular kit nature, high-grade steel components, and stellar support make it both a practical tool and a fun project for anyone serious about responsible disposal and material recycling.

The molding equipment of the hydrostatic automatic casting molding line is a hydrostatic molding machine, and its main structure includes a workbench, a blowing pre-tightening mechanism, a multi ...
