

High-precision optoelectronic fusion in five Central Asian countries

In response to the challenges of acquiring spatial target position information and achieving high precision in existing methods, this paper proposes a multi-dimensional high-precision ...

This article discusses the design of a high-performance quasi-optical mode converter for the TE₃₃₁₂ TE₃₃₁₂ mode at 210 GHz. The conversion process is challenging due to a caustic-to-cavity radius ratio ...

The accuracy assessment based on high-resolution plots showed that the OA of the existing landcover products in the five Central Asian countries was 60% to 80%.

Tunghsu Optoelectronic is the leading manufacturer and supplier of high-end intelligent equipment in China, which is a public listed corporation and the subsidiary of Tunghsu Group.

Here we propose an all-analog chip combining electronics and light, named ACCEL, for energy-efficient and ultra-high-speed vision tasks with competitive task performance and scalability.

Access scientific research, citation data, and authoritative publications across all disciplines on Web of Science.

The project aims to build a high-output laser system with wide field-of-view modular continuous-wave sources (MWCW), along with a highly integrated SiPh chip platform that supports ...

Japanese companies excel in high-performance laser diodes, optical sensors, and precision optoelectronic components for industrial and automotive applications. The country's emphasis on ...

While most of the revenue gain occurred in Asia-headquartered firms, in particular China, Korea, and Japan, other key regions also saw moderate growth over the period.

High-precision optoelectronic fusion in five Central Asian countries
