

Low boot resolution after KVM switch

When switching between the computer the Fedora computers can't keep the resolution. I have res 2560x1440 before I switch and when switching back I get res 1024x768.

When I use this cable to connect monitor #1 to the KVM, then monitor #1 is now displaying low resolution. The thing is, I usually use this cable when I connect monitor #2 to my gaming PC, and it ...

I'm running a MX 21.3 with xfce desktop and it is connected to a KVM switch so i could share my large screen (49" ;) with my office laptop. Whenever I switch from my linux to my windows ...

Just bought a KVM switch for me to easily switch between my work laptop and my personal desktop. Problem is, the resolution goes down from 1920x1080 to 1024x768 whenever I ...

When I boot into Linux, the screen just stays black but the computer stays on. If I flip the KVM back and forth, sometimes the display will kick up. However if I do get it to display something, ...

Video + Article Guide. Fix KVM resolution and display problems in no time. Follow our easy troubleshooting guide to ensure your KVM switch works perfectly.

At this point things stabilize, and switching back and forth yields 1920x1200 for windows and 1024x768 for Linux (that is, the resolution for Linux is no longer dropping).

You shall try setting a lower resolution output (such as 720p or 1080p) and then reconnecting to the KVM switch to test if the monitor displays an image. If it works with the adjusted ...

I have a hardware kvm switch with a button and sometimes when I switch back to the Pi, the monitor says it can't find an HDMI signal. I turn off the Pi with it's hardware power switch, unplug ...

Sounds like the monitor EDID settings (what resolutions/refresh rates it supports) are not getting to Ubuntu when it's connected via the KVM. You can run xrandr to see what resolutions are ...
