

Namibia's information and communications technology (ICT) sector is entering a decisive phase in 2026, driven by structural changes that are reshaping connectivity, competition and digital ...

The LPJM19434CNL supports speed 2.5G Base-T, compliant with IEEE 802.3, UL, Reach, RoHs, ISO19001, ISO14001 standards. It can be used to support applications, such as Monitoring Systems, ...

Namibia's telecom regulator plans a phased switch-off of 2G and 3G networks starting in 2026. The country aims to rely on 4G, 5G, and low-Earth-orbit satellites to expand broadband access.

To reach these targets, Namibia is moving away from legacy technologies such as 2G, 3G and WiMAX, and is instead prioritising the deployment of 4G, 5G, Wi-Fi 6, fibre-optic networks ...

With the arrival of Google's Equiano undersea cable, which has increased internet speeds by over 2.5 times, and the government's ambitious plans to transform the country into a fully digital nation by ...

The expansion of 5G wireless, the fifth generation of wireless technology, is the updated version of the 1G, 2G, 3G, and 4G wireless networks. It will deliver increased Internet speeds, more ...

Namibia's information and communication technology (ICT) sector will undergo changes in 2026, including the rollout of 5G services. This will introduce low Earth orbit (LEO) satellite internet ...

The 5G benefits range from faster speeds (up to 10x faster), much lower latency (up to 50x lower) and greater capacity allowing many more devices to be connected at the same time.

Statements from Telecom Namibia executives or government officials about the launch and expansion. Comments on the expected impact of 5G on the country's development.
