

# Optical Interface Coupler

The Clip-On Coupler FOD 5503 provides non-invasive bi-directional coupling into 250 micron coated singlemode fibers. The FOD 5503 offers the ability to couple fiber optic talk sets at any intermediate ...

Optical coupler is a semiconductor device, which is designed to transfer electrical signals by using light waves in order to provide coupling with electrical isolation between circuits or systems.

Intuitive chip-scale detachable connectors and novel multichannel active alignment architectures herald more -- and more efficient -- CPO deployments.

The mechanical-optical interface (MOI) is a monolithic component with an array of collimating lenses designed for efficient coupling between the on-board active components and a detachable fiber optic ...

Our optical interface couplers are meant to be used in conjunction with our Absorbance Cross Flow Cell line and comes in 3/8", 1/2" and 3/4" configurations with adjustable lightpaths. For use in demanding ...

C-12 SYSTEMS INTERFACE DEVICE: Optical Coupler Module The Banner model OC-12 is an optical coupler module used to interface the outputs of amplifiers and amplified scan-ners to other logic ...

Our Optical Interface Couplers (OICs) are sold either separately as stand-alone items in support of photometric analyzers for industrial applications, or packaged with a compatible flow cell. They are ...

Our optical interface couplers are meant to be used in conjunction with our ...

Fiber optic couplers distribute or combine optical signals between fibers. Couplers can distribute an optical signal from a single fiber into several fibers. Couplers may also combine optical signals from ...

Coupling of light between different photonic devices, for example on-chip waveguides, fibers, and free-space optical elements, is an essential function enabling integrated optical systems.
