

Teledyne Advanced Electronic Solutions offers the most innovative design approaches in optoelectronics modules for high data rate, broadband communications. Our expertise in this field ...

The N7005A Optical-to-Electrical Converter is a high-sensitivity photodetector module for optical-to-electrical conversion of optical signals into oscilloscopes.

An electro-optic modulator (EOM) is an optical device in which a signal-controlled element exhibiting an electro-optic effect is used to modulate a beam of light.

It details the main types of EOMs: simple phase modulators, polarization modulators, and amplitude or intensity modulators which typically combine a Pockels cell with polarizers.

Based on semiconductor indium phosphide, efficient at absorbing and emitting light and allows integration of electronic and optical components; supports both EAM and MZM

An Electro-Optic Modulator (EOM) is a device that modifies the properties of a light beam, such as its phase, amplitude, or polarization, in response to an applied electric field.

Electro-optic modulators are essential components in modern communication systems and are additionally expected to play an important role in future quantum networks. While bulk modulators ...

Electro-optic modulators (EOMs), serving as indispensable components within photonic integrated circuits, are essential for enabling energy-efficient, high-speed, and high-capacity optical ...

We have designed and manufactured a full range of custom and standard optoelectronic devices for Military, Aerospace and Industrial applications. Contact our team to find out how we can help solve ...

We manufacture individual optical and optoelectronics OEM modules for our customers. The tasks and solutions are diverse and range from classic lenses and high-performance lighting modules to ...
