

Industrial Fiber Optics is a world leader in manufacturing polymer and large-core silica optical fiber cable assemblies. We specialize in providing leading edge solutions and manufacturing technology ...

Affordable, durable and flexible, plastic pervades modern life, appearing in everything from packaging to clothes to beauty products. But it is thrown away on a massive scale: every year, ...

plastic, polymeric material that has the capability of being molded or shaped, usually by the application of heat and pressure.

This article explores the technological breakthroughs redefining manufacturing workflows, the strategic imperatives driving industry leaders, and the future trajectory of optical cable production.

Plastic is a synthetic material used in a wide variety of applications. Learn more about it here.

A premium Plenum-rated cable, the NYCE NPC-75 Plastic Optical Fiber (POF) Cable is manufactured by NYCE. A reliable, simple-to-install 100Mbps Ethernet solution is offered by NYCE ...

This comprehensive research report categorizes the Plastic Optical Fiber Cables market into clearly defined segments, providing a detailed analysis of emerging trends and precise revenue forecasts to ...

Learn what the numbers on plastic containers mean, which plastics are safe, which to avoid, and how to recycle them properly using the 1-7 resin code chart.

Plastics are incredibly versatile materials that can be used to make a variety of products. They are lightweight yet durable, strong yet malleable, and relatively inexpensive to produce. There are seven ...

Explore the emerging market trends in plastic optical fiber cables shaping future communications and data transmission technologies.

A team of researchers at Keio University in Japan has developed a breakthrough plastic optical fiber (POF) technology that could transform short-range, high-speed communications in...

Plastics are a wide range of synthetic or semisynthetic materials composed primarily of polymers. Their defining characteristic, plasticity, allows them to be molded, extruded, or pressed into a diverse ...

Plastic is a word that originally meant "pliable and easily shaped." It only recently became a name for a category of materials called polymers. The word polymer means "of many parts," and polymers are ...

Plastic Optical Cable Production

Tracey Woodruff, PhD, MPH, offers insights on what her research on microplastics has led her to change how she and her family eats and what cleaning products she uses.

In order to help you educate yourself on these matters, Non Toxic Revolution has created this guide to the 7 types of plastic and what they mean for our bodies and the planet.

Plastic fiber optic cables, also known as polymer optical fibers (POFs), are composed of transparent polymer materials as the core and cladding. Unlike traditional glass fibers, plastic fibers ...
