

Silicon Photonics Lamination Machine

Our expertise in wafer lamination ensures that your wafers are laminated with the utmost precision, providing a consistent and protective layer necessary for high-quality device production.

Explore fully automatic film laminator machines designed for precision and speed in film lamination. Innovative auto film laminator solutions for various industries.

Delivering precision optical alignment that ensures low-latency, high-bandwidth solutions for AI, HPC, and 6G networks. Pioneering high-precision design and advanced substrate fabrication to power AI, ...

Canon has developed a lineup of Semiconductor Lithography Equipment designed to meet the technical requirements of a wide range of applications in addition to traditional semiconductor wafer processing.

We use our single chip polishing machine for prototype projects and have a multi-chip machine for volume manufacturing. We have facilities for both manual and automated die bonding or flip chip ...

The manual wafer laminator machine series is a fast and efficient laminating machine specially designed for wafer, glass, LED, PCB and ceramic cutting processes.

Fully automatic mounting and laminating (suitable for mounting wafer + ceramic plate / glass). The top and bottom plate of the hold-down mechanism are heated to deal with multiple types of film.

Applicable to tenting lamination, embedding lamination, ultra-thick resist lamination, conformal lamination and gas hermetic lamination etc. to wafer rough surface. For best lamination condition, ...

Automatic substrate laminating machine is our independent research and development, manufacturing of high performance, high stability, high yield automatic substrate laminating machine. Manually ...
