

Sunsea Power Supply Unit

2G Engineering designs and manufactures custom subsea power electronics for demanding underwater applications. Our power systems are engineered in-house from concept through production, ...

The next-generation electronics included with the SVS-708-800 Surface Power Supply unit provide real-time monitoring of power supply and tether performance, ...

Complete set of modules to deliver power transmission, distribution and supply, including subsea switchgear and uninterruptible power supplies.

The subsea variable speed drive (VSD) is the unit responsible for supplying power and protecting subsea motors for compressors and pumps. It uses the field proven Siemens Perfect Harmony multi ...

As global data demand accelerates, subsea power systems become even more critical. Solutions such as VB500 aren't just components; they are the engine room of the digital age, ...

Our optimized power systems provide the industry's highest power density, allowing flexibility to modernize or retrofit. In addition, safely distribute and control power throughout the ship.

The new generation Subsea Power Supply Unit (SSPSU 5G) is a 3000m depth rated, integrated power supply unit to power our sonar (Echoscope®; or Echoscope PIPE®;) and rotator (ISAR or IPT) series.

The Subsea Power Supply provides a reliable solution to convert a universal AC input (85 V to 264 V, single phase) into a stable 24 V DC output. It delivers up to 500 W of power and 21 A of current. ...

The Subsea Power Supply provides a reliable solution to convert a universal AC ...

Complete set of modules to deliver power transmission, distribution and supply, ...

Our subsea power supplies and shipboard power supplies are used to supply power to compressors, pumps and other electrical components used in offshore, onshore, shipboard in both shallow and ...

Intelligent, all input circuits are equipped with smart meters to detect full power parameters, and upload data to machine room via R485 interface, output the circuits status by indicator light.

The next-generation electronics included with the SVS-708-800 Surface Power Supply unit provide real-time monitoring of power supply and tether performance, enhancing the capabilities of ROVs for ...
