

# Time synchronization of relay protection devices

In full digital substation applications with process bus implementing IEC 61850, accurate, and error free time synchronization is highly important for synchronization of current and voltage measurements ...

As authenticity and integrity of time synchronization is crucial, IEEE 1588:2019 offers an integrated security option as well as further security recommendations

Many devices offer multiple ways to synchronize device time, providing different or higher-accuracy synchronization. This article discusses some of these time-synchronization needs.

Substation automation demands precise time synchronization for a variety of Intelligent Electronic Devices (IEDs). There are different possible approaches to achieve the required accuracy.

The scheme utilizes High-Availability Seamless Redundancy (HSR) to ensure communication redundancy and employs the Precision Time Protocol (PTP) to achieve precise time ...

Within this document, the ABB method of ensuring the accurate timestamp of an event occurs independently of the SCADA protocol installed within the system.

Satellite time synchronization devices ensure precise, unified timing across power stations, enabling reliable protection, control, and monitoring in modern smart grids

This paper discusses implementing PTP master-clock functionality in protection relays and how it simplifies the substation protection-and-control architecture and increases reliability and availability of ...

Many different time-synchronization methods currently in use provide time using different physical dissemination methods and deliver varying levels of accuracy. In many cases, these time ...

IEC 61850-5 standard defines the time requirements for latency in protection systems as the transfer time . Table IV lists the transfer time requirements for protection and control applications.

This pilot project shows a simple and cost effective way to retrofit already installed protection relays independently of the time synchronization method required by these devices.
