

Why are there so many fiber optic cables

The equipment, ships and personnel to make and lay and splice these cables across the ocean are ridiculously expensive - so there are only a few companies who specialize in doing this.

Fiber-optic cables are made by taking an individual fiber or bundle of fibers and adding coating and protective layers. Fiber-optic cables like the ones stretched across oceans may have 10 ...

A fiber-optic cable, also known as an optical-fiber cable, is an assembly similar to an electrical cable but containing one or more optical fibers that are used to carry light.

Optical fiber is a strand of glass that's been "drawn," or melted down, to about as thin as a human hair. Light passes through this glass carrying data, providing an internet connection. The...

Fiber-optic technology may be commonplace now, but its origins can be traced to the late 1880s. In this article, we'll look at some crucial fiber optics statistics and facts.

It's all part of a gradual transformation of subsea communications. Where once cables were the exception, linking a few high-priority urban centers, now they're becoming a world-spanning ...

In manufacturing fiber optic cable, optical fibers are surrounded by materials protecting optical fiber from the environment and excessive strain to assure it will function properly for many decades.

Fiber is already an essential part of everyone's internet experience, as the backbone of the internet is built from huge fiber-optic cables. Fiber-optic cables are made from thin fibers of glass ...

In this article, we'll highlight the use of fiber optic cables and discuss the growing demand for these cables. We also address how we can help provide your standard and custom fiber optic cables.

Fiber to the home is one of many "fiber-to-the-x" (FTTx) network designs. For example, many network developers build out fiber-to-the-premises (FTTP) or fiber-to-the-building (FTTB) ...
